Overview

KwickScreen® is an ingenious way of managing space within the healthcare and longterm care environments. Available as fixed or portable and in a number of finishes to enable privacy, display messages or images while keeping patients engaged in unit activity and isolating non-airborne infections.

KwickScreen® uses a patented high tech rollable material technology that enables it to be incredibly retractable and portable. This Rola-Tube technology is new and used across many industries, including NASA.

“KwickScreens are really versatile and help us manage our space. They can be portable or fixed to the wall, they bend around corners and it’s easy to change the inner screens.”

Samantha Martin, Peri Operative Matron, Kings College Hospital

KwickScreen®’s versatility is proving it to be invaluable in many healthcare environments. Thanks to its many key features it is already in use within multiple National Health Service Trusts in the UK as well as at hospitals in the USA, Netherlands, Italy, Canada, and UAE.

- Infection Control – sections off areas for isolation
- Creates Privacy & Dignity
- Easy for one person use
- Retracts for storage
- Small footprint when in use
- Easy to clean and clean around
- Extends up to 10’3” wide x 6’3” high and can bend up to 180 degrees at any width
- Clinical trials show improved hand-hygiene compliance
- Available in a variety of finishes; opaque, translucent, transparent, or printable with a choice of graphics
- Replaceable inner screen

Features & Benefits

- Portable or fixed to wall options available
- The portable KwickScreen® is easy to move around
- Easily used by one person
- Pulls out and retracts to any length up to 10'3"
- Robust and durable
- Bends up to 180 degrees at any point of the width

Fixed to wall

Portable

Cost savings

- Improves bed space management by freeing up side-rooms
- Reduces Hospital Acquired Infections

Easy cleaning

- Specially designed to be easily steam or wipe cleaned
- Easy to clean floor underneath as frame is self supported
- Promotes better hand hygiene compliance
- Inner screens can be easily replaced

Small footprint

- Retracts into compact casing space for easy storage
- Self supported frame, leaving floor space free
- Stores away easily

Good for patients

- Reduces the need to move patients to different rooms or units
- Isolation screen doesn't stigmatise patients in a unit and maintains full visibility
- Privacy screen gives patients or visitors their own designated space

“With KwickScreen you can move the space to the patient instead of moving the patient to the space.”

Infection Control

With a lack of side rooms available in many hospitals, outbreaks of non-airborne infections including MRSA and Norovirus can prove a costly problem. Often infected patients don't need to be placed in side rooms and only require a physical barrier between bed spaces to prevent transmission through droplets.

The KwickScreen® provides both a physical barrier around the infected patient and a psychological trigger that has been proven to improve hand hygiene compliance.

“ *Clinical trials have shown that KwickScreens significantly improve hand-hygiene compliance.* ”

Dr. Peter Wilson, Consultant Micro-Biologist at University College London Hospital, NHS Foundation Trust

KwickScreen® provides the solution

- Allows separation of infected areas within a unit
- Isolates non-airborne infections in units
- Provides visibility and isolation
- Improves hand hygiene compliance and prevents cross-bed traffic
- Low levels of patient stigmatisation
- Hygiene units for hand gel, gloves and gowns available
- Easy to clean, small storage footprint when not in use

“ *With no reimbursement for Hospital Acquired Infections, Healthcare facilities have been forced to reevaluate their use of curtains.* ”

Uses Within Healthcare

Emergency Rooms

The flexibility to increase space without constructing walls.
No more patients in corridors.

Emergency Preparedness/Disaster Planning

Portability of the KwickScreen enables healthcare providers to set up triage areas anywhere and in seconds. No curtain rails needed. Easily and quickly moved from one side of a hospital to another side, where needed.

ICU/Recovery

Easily create a two bed unit out of a one bed room.

Isolation Areas

Create with ease when needed.

Better Patient Satisfaction

A pediatric patient would rather be surrounded by cartoons than a faded yellow hospital curtain. A pain management or a chemo/dialysis patient would rather see a tranquil lake or forest instead of a fading curtain.

KwickScreen®'s have been used recently:

- At the Olympic village in London for the Athlete's Health Clinics
- By the Dutch government for mobile Dental clinics
- In over 30 Hospitals that are phasing out curtains because it has been proven that curtains aid in the rapid spread of Hospital Acquired Infections (HAIs)
- For Physical Therapy units, so as to divide for Male and Female patients.

Other Uses for Kwickscreen

Advertising, Branding, Guerilla Marketing

This is the ultimate indoor billboard.

Event Planning

Trade Show Booths

Portable, easily set up

Hotels/Airports/Transportation

Can be used to hide baggage for check-in and check-out and can provide a Corporate message at the same time.

Shopping Malls

Used by mall owners to sell advertising space that can be moved with ease to different spaces within a mall.

Mobile Flu/Medical/Dental/Drug Testing Clinics

Schools/Colleges

Partition classrooms and split computer labs

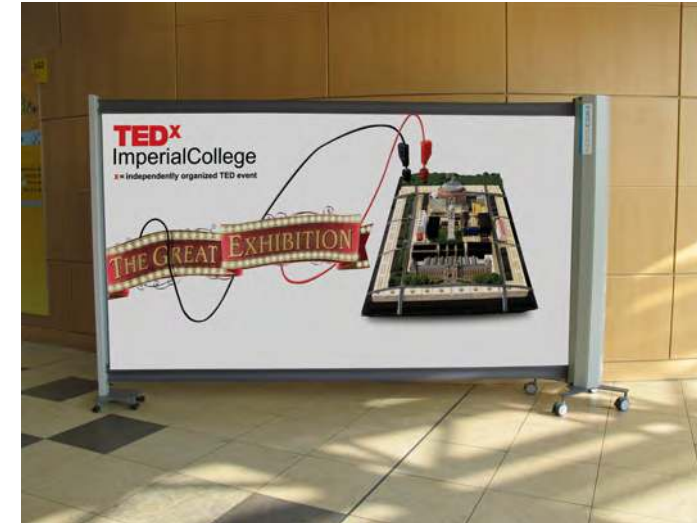

Government

Disaster and Terrorism reaction planning

Offices

Quickly set up portable conference areas

And as many more useful application as you can imagine!

Print Options

KwickScreen® is available in 3 finishes, opaque, transparent or translucent, all of which can be printed. There is a huge range of designs to choose from and specific print designs can be customised to suit your environment.

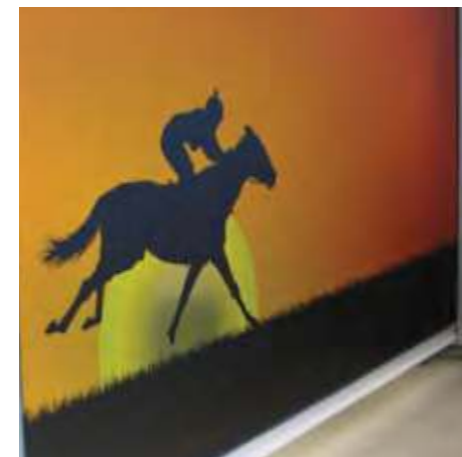

Photography, vector illustrations or paintings can be printed in high quality on the inner panel of a KwickScreen®, to create a different ambience on your wards.

Using art in healthcare is gaining growing recognition as a means for improving the healthcare process and environment. Several studies both in Europe and the United States have shown the great many benefits offered to patients, staff and visitors by art.

- Art in healthcare can provide psychological, physiological and biological benefits to the patient and reduce anxiety and depression, especially in preoperative stages.
- Requests for analgesia are reduced giving significant economic benefits.

KwickScreen® Designs

Choose a color, a design, and/or a Corporate Logo. Even have a screen sponsored! KwickScreenUSA will have your design produced.

FAQ's

How much does a KwickScreen® weigh and how easily does it move?

The KwickScreen® weighs 55 pounds. One person can easily open, close, adjust and move the KwickScreen® around. The screen is very stable.

When are Infection Isolation KwickScreens® used?

Transparent screens help facilitate effective nursing control by preventing traffic between bed-spaces. This frees-up side rooms, patient movement is reduced and hand-hygiene compliance and overall bed utilisation improves.

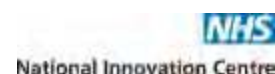

What happens if the screen gets damaged?

The inner screen section is replaceable, so if it gets damaged or if you want to use a different screen, a new screen can be swapped in easily at little cost.

How should the KwickScreen® be cleaned?

Microbiological tests have shown that KwickScreen® can be cleaned thoroughly with a chlorine-water mix or standard hospital cleaning wipes. The flat smooth screen surface makes it perfect for steam cleaning and all components are compatible with hydrogen peroxide vapour.
