

STORAGE AND TRANSPORT OF LOANER/VENDOR SETS

Safe & Smart Sterile Logistics

Preventing cuts, tears and holes in wrapped instrument trays – and thus ensuring sterility of surgical instruments all the way from sterilization to storage to surgery – can be a challenge.

With Belintra's Sterisystem™ solution, you can reduce touchpoints and avoid stacking instrument trays onto each other. This results in drastically improved sterility, increased productivity and reduced costs.

Belintra has developed a variety of products to serve the needs of specific departments, as well as storage and transportation solutions which can be used across different departments. Patient care items can now be cleaned, then transported, organized and stored with one unit.

This is a permanent solution to dealing with temporary storage of some of the most important tools in medicine. When precision, organization and ready access matter, Belintra delivers with surgical precision.

With Belintra Sterisystem Healthcare Solutions from Patterson Pope, you can:

- » Reduce tears, cuts and holes in loaner/vendor sets
- » Store sets securely and efficiently
- » Maintain overview of set collection
- » Safely transport sets to the OR without touching them

Thanks to efficient storage and transportation solutions, every healthcare organization can save time on storing and retrieving instruments and instead invest more resources towards patient care.
