

# Secure Tenant Storage

## RESIDENTIAL LOCKER SYSTEMS

### A New Amenity for Tenants

*It doesn't matter if a package has high or little-to-no monetary value – its contents are usually priceless to its recipient!*

Residential Locker Systems are designed for use in multi-unit residential buildings. They reduce costs associated with managing and distributing parcels to residents. They also improve chain of custody and ensure secure and accountable delivery of parcels to the recipient. These lockers eliminate the need to manually store, log and retrieve packages for residents. As deliveries arrive, they are placed in a locker using a completely secure process. Residents are immediately notified of the delivery by email or SMS, enabling them to pick up their packages at their convenience. They access the System and retrieve their parcels by simply entering a secure, uniquely generated authentication code or PIN number or by swiping their resident RFID card.

### Smart Lockers – Packaged Asset Delivery

- » Designed and Built for Specific Residence Needs
- » Modular Configuration and Plug-and-Play Components
- » Simple, User-friendly LCD Touch Screen Interface
- » 24/7 Availability Improves Resident Access
- » Compatible with Biometric and RFID Devices
- » Manual Override for Emergencies and Power Outages
- » Integrated Video and Image Monitoring
- » Ship Packages and Mail Utilizing Same Interface
- » Perfect for Dorms, Apartments and Condos
