

GROW

You're the expert in growing.
We're the experts in growing more.

Integrate GROW high-density shelving with any lighting or climate control system to optimize space, save on energy costs, and maximize cannabis yields.

You're the expert in growing. **We're the experts in growing more.**

Grow Your Profits

You have unique cultivation methods. We have decades of space-saving experience. Together we can maximize space and boost your bottom line. Designed specifically for cannabis operations, our space-saving solutions integrate with your facility and your processes to build better places to work and grow.

1 Maximize Yields

Mobile multi-tiered shelving systems eliminate wasted aisle space, and can extend up to 30 feet tall, resulting in up to 4x more grow area.

2 Improve Airflow & Light Exposure

Our GROW mobile system works with any and all lighting, irrigation, and ventilation systems to create optimal conditions for plant growth.

3 Improve Work Environment

Our systems allow staff to easily access every plant. No more crowded aisles or straining to reach plants in the center of wide tables.

4 Reduce Energy Costs

You're paying for lighting and climate control, so growing more plants in the same area reduces your cost per plant.

5 Install in Phases

Stay on budget with a longer-term plan to install GROW systems after successive harvests, or year after year as profits grow.

6 Get Professional Service

Your local Spacesaver consultants and factory-certified technicians are just a phone call away, ready to help you optimize your space.

How our GROW Systems Work

The GROW by Spacesaver system allows tables to slide together by mounting shelving on rails that are installed in or on top of your existing floor. Simply open the aisle you need with an ergonomic handle or the touch of a button.

PROBLEM

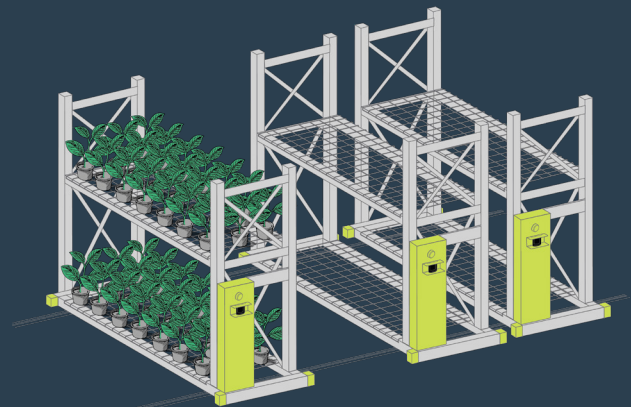

Standard Tables Waste Space

Static tables waste space both vertically and horizontally. Every aisle is a missed opportunity to grow more, and you're paying to heat and cool empty air above the tables.

SOLUTION

GROW Systems Maximize Yield

Our mobile systems move together, taking full advantage of available floor space. They can also reach up to 30 feet tall, allowing for two, three, or even four tiers of growing space.

“Our goal is to maximize our space, and we’ve been able to do it with Spacesaver’s help.”

General Manager, Cannabis Grow Facility

Finding the Best Fit

From concept to project completion, our team works closely with yours to make the best use of your space and your existing resources. Our systems can integrate with your facility and equipment, or we can work with your contractor to install our systems in new construction.

Customize Your Solution

Every grower has their own processes, techniques, and trade secrets — so why settle for a one-size-fits-all solution? We'll help you design a system that's tailored to your precise needs. Choose the size, height, finishes, and accessories that you need and our team of engineers will create a solution that flows seamlessly with your processes. We'll also help you stay within your budget by installing systems that grow with you.

Phased Approach

We work with your schedule and your budget to create scalable solutions. In order to minimize downtime, we routinely install additional systems in rooms that have recently completed a harvest. We can also add more carriages to your GROW system at a future date to accommodate your budget as you scale your operation.

Partnering with Consultants

If you already have a consultant or in-house experts on board, we're happy to work with them to implement your vision. If you're in the early stages and would appreciate advice from experienced professionals, we've partnered with the team at American Cannabis Company (ACC), who can provide full-service consultation and product solutions from licensing and construction to cultivation, processing, and dispensing.

Your Design Team

Spacesaver's nationwide distribution network ensures that you get local service and expertise for planning, installation, and long-term maintenance. We take the time to understand your needs, assess your space, and work with you to design your solution. Our local distributors are backed up by our in-house engineering and custom manufacturing teams at our Wisconsin headquarters.

Case Study: California Cannabis Grow Facility

Improving efficiency to maximize yields

The owners of this facility in the San Francisco Bay Area had most of the pieces in place to build a successful grow: they had large grow rooms, a great staff, and the funds to set up state-of-the-art lighting and fertigation systems. What they lacked, though, was an efficient way to use their space. The grow rooms were crowded with large single tier tables that were uncomfortable for staff to use and that wasted space in the aisles.

In an effort to optimize, increase yield and improve ergonomics in the space, the owners decided to install two-tier GROW mobile storage systems in the grow rooms. Designed specifically for cannabis applications, GROW systems support multiple shelving tiers and can be manufactured in virtually any size. Staff can generate aisles where needed, and aisle widths can be adjusted to suit the needs of individuals or entire teams working together.

Our GROW system was initially installed in a single room, increasing capacity by 68 percent.

The increased yields justified new systems in two additional rooms. In each case the local Spacesaver consultant worked with staff to minimize disruption and downtime, timing the mobile system installations to coincide with the end of each room's harvest.

Overall, the facility more than doubled capacity in its three flowering rooms by replacing wide tables with two-tiered mobile GROW systems. The GROW system is more comfortable for staff to use, too, with wider aisles and narrower tables to reach across.

Ready to **GROW** more?

By optimizing space, improving ergonomics, and reducing energy use, GROW integrates with your existing systems to create up to four times the grow area of a room with stationary tables.

See for yourself how GROW can make a difference in your facility. Here at Spacesaver, we have a proven track record of helping clients improve efficiency and increase profitability for nearly 50 years. Our in-house engineers and project managers, along with local teams of space planners and installers, are ready to create a solution that's custom-made for your facility.

Contact us to arrange a free, no-obligation consultation with your local Spacesaver representative. We look forward to doing business with you.
