

Introduction to Smart Storage

SMART BUILDINGS DESERVE SMART STORAGE

Buildings, offices and universities — they used to be spaces people needed to adapt to. Now, environments need to adapt to people and the way they interact, work and learn.

When we talk about "smart" buildings and storage, we tend to talk about tech and automated processes. And while that's true, at their core smart buildings are about creating more efficient, attractive and people-centric spaces.

AT THE CENTER OF THESE SPACES IS STORAGE.

Office & Workspace

Smart storage options — such as lockers with technology integrations — create ways for companies to use data to ensure the workplace is flexible and adaptable. Many companies are utilizing the test and learn approach as they maneuver the hybrid workforce. A truly agile workplace needs to have smart lockers that can adapt as quickly as the needs of the office change.

Schools & Universities

No matter how the campus experience changes over the next few years, one thing will remain constant: students will always need places to store their belongings, whether it's for the whole school year or a semester — whether they live on campus or attend a commuter college. Parents, alumni, and visitors will need places to store their valuables during a football game, or a concert.

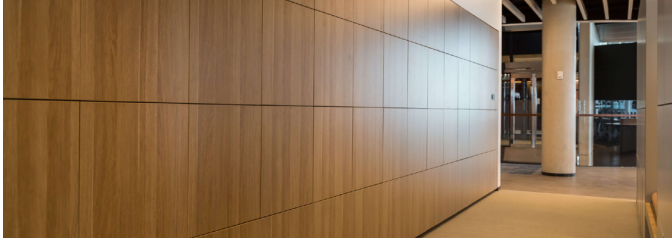

Sports & Fitness

Many fitness and sports club members treat these facilities as a home-away-from-home and have high expectations for the safety and security of their belongings. Creating effortless storage solutions shows members you want to protect their investments as much as they do.

Locker Rental

Give employees and students all the information they need right at their fingertips. Reserving a locker to store their belongings for the day, is a streamlined experience like no other. Seamlessly transform your office into a flexible working space or connect all point of storage on campus while empowering your employees or students through their smartphone.

Reduce the amount of time delivering packages to employees by:

75%

Delivery Lockers

Parcel delivery lockers provide a secure, efficient way to manage and distribute packages to those who work, learn and live in your buildings and offices.

Make better use of your space — and time.

Reduce the amount of time handling packages for students by:

93%

Food Delivery

When employees and students use food delivery apps at work or all-night study sessions, the delivery person usually is unable to make the delivery to the person who ordered it. Smart lockers solve this problem.

IT Check-in Check-out

When employees need to get their computer fixed or need to check-out a temporary computer, smart lockers are another convenient way to easily get the equipment you need while maintaining complete chain of custody.

Dry-Cleaning Delivery

Many busy professionals use drycleaning services, but it's tough to find the time to pick up clothing in the midst of their other responsibilities. Dry-cleaning delivery services with a smart locker can be a huge help to time-strapped employees.

Expertise in evolving spaces and storage needs

Whether it's an office, a space for learning, or a residential building, we'll bring our knowledge of current and future storage trends to the table.

Support, installation, project management you can trust

Bringing the projects to life. With over 50 years of solving these challenges, we've mastered the dance and can flex and adjust when needed — making sure every project is successful.

Custom designs based on your needs

We treat every project as a unique one. The knowledge and experience we've gained combined with your needs to create a tailored solution to fit your present — and future.
