## 1. Rack Components

a. A starter consists of:

- $2-18$ " $\times 761 /{ }^{1 / \prime}$ closed angle uprights
- 2 - "F" shelf supports
- 1 - Canopy top
- 6 - Cradles (2 used per opening)
b. An adder consists of:
- $1-18^{\prime \prime} \times 761 / 4$ closed tee upright
- 2 - "F" shelf supports
- 1 - Canopy top
- 6 - Cradles
c. Cradles are available individually for custom applications, or as replacements. ( 2 cradles needed per opening)
d. Fire Hose Racks are single face only, typically 3 levels maximum for accessibility. Max height mandated by OSHA.
e. For large diameter hose, deeper uprights may be used. Consult Spacesaver for weight and capacity limitations.

## 2. Rack capacity for most popular widths of fire hoses typically stored

To determine how many hoses will fit per opening, first determine the rack (cradle) width to be used ( 24 ", $30^{\prime \prime}, 36^{\prime \prime}, 42^{\prime \prime}$, or $48^{\prime \prime}$ ). Remember that the usable width between the 4 -post uprights will be reduced by $2^{\prime \prime}$ per opening.

The widths of the most commonly used hoses (hand line) are:
$13 / 4 "$ hand line which is 3 " wide when flat rolled.
$21 / 2^{\prime \prime}$ hand line which is $41 / 2^{\prime \prime}$ wide when flat rolled.

## Capacity Chart

| Cradle Width | $13 / 4^{\prime \prime}$ hand line | $21 / 2^{\prime \prime}$ hand line |
| :---: | :---: | :---: |
| $24^{\prime \prime}(22 \mathrm{c})$ | 7 | 4 |
| $30^{\prime \prime}(28 \mathrm{c})$ | 9 | 6 |
| $36^{\prime \prime}(34 \mathrm{c})$ | 11 | 7 |
| $42^{\prime \prime}(40 \mathrm{c})$ | 13 | 8 |
| $48^{\prime \prime}(46 \mathrm{c})$ | 15 | 10 |

## 3. Weights and rolled up dimensions

The weights and diameter of the hoses are as follows.
$13 / 4^{\prime \prime}$ hand line $=20 \mathrm{lbs}$. per $50^{\prime}$ length $/$ Typical rolled diameter is $201 / 2^{\prime \prime}$.
$21 / 2^{\prime \prime}$ hand line $=34 \mathrm{lbs}$. per $50^{\prime}$ length $/$ Typical rolled diameter is $23^{\prime \prime}$.
