PASS-THROUGH GEAR LOCKERS

Saving time and improving military readiness

Spacesaver's custom manufacturing capabilities allow its engineers and manufacturing teams to combine product features in unique ways. A creative approach helped improve readiness at this Air National Guard facility, where supply technicians needed to transfer expensive gear back and forth between helicopter pilots and the supply room. They needed a secure solution that would function similarly to pass-through evidence lockers, in which items are deposited into a locker on one side of a wall and retrieved on the other side. During a facility remodel, the architect worked with the local Spacesaver consultant to design lockers that were a perfect fit for their gear and requirements.

The resulting lockers are a hybrid of Spacesaver's personal storage lockers and pass-through evidence lockers. From the corridor accessed by the pilots, the lockers look fairly typical: they're two-tiered, with louvered steel doors, a shelf, and a padlock hasp. Instead of a solid steel back, though, the lockers are equipped with double-mesh doors that open into the supply storage area. The mesh doors provide technicians with direct access and visibility into the lockers, allowing them to retrieve and replace helmets, communications equipment, and other gear for repair or routine maintenance.

The new setup streamlines workflows and minimizes handling of delicate and expensive equipment.
