

SECURE TENANT STORAGE

RESIDENTIAL STORAGE SYSTEMS

Secure Storage for Tenants

It doesn't matter if it's a bike, a set of golf clubs or last summer's wardrobe, it's important to your tenants - and they need a place to keep it.

Space - it's a common challenge. Most residential buildings especially in larger cities, do not have enough closet or storage space within the living area for their tenants. Welded wire tenant storage lockers are an ideal way to provide tenants with additional storage space within common areas in office and multi-residential buildings. This additional storage is very valuable to the tenants, and for the building it can be a valuable selling point. Security is also a key. Bicycle stacker racks and wall mounts are a great way to save space as well as prevent bike theft.

Welded Wire Storage Lockers

- » Strength and flexibility are combined by using welded wire mesh and framed panels.
- » Easy installation with modular design and pre-hung doors.
- » Quickly modified in the field making installation around electrical conduits, heating ducts and water pipes a snap.
- » Two styles available: single-tier, walk-in or double tier over/under units.

Secure Bicycle Racks and Mounts

- » Bike Stacker - Staggered, formed bike trays hold any style bike upright and in position, while providing added clearance between stored bikes
- » Wall Rider - Wall mounts and six-foot long, heavy duty 1/4" vinyl-coated aircraft quality cable is permanently connected to mounting base for securing stored bicycles.
