

# CORPORATE MAIL CENTERS

## Consoles and Sorters

### *First-Class Options*

*The more effectively an organization can manage documents and materials at their source, the more efficiently that organization will operate. With that in mind, we provide several console and sort module options to help create environments for people to do their work well.*

### Consoles

Consoles provide durable work surfaces and storage options for supporting mailing equipment or sort modules. They are available with a wide range of shelf and storage options, and a built-in track to securely lock sort modules in place. Mailroom technology and equipment is supported by work surfaces calibrated to the precise height required for stress free operation.

Aluminum framed consoles are designed for the toughest work environments. Our exclusive aluminum extrusions surround all vertical and horizontal surfaces and can't chip or dent like painted metal. And designers appreciate the continuity of the ergonomically detailed work surface edge, an uninterrupted design element that protects and connects adjacent consoles. For applications where the details and finishes of millwork construction are required, we offer laminate console bases in a range of standard or designer-specified finishes.

### Sorters

Sort Modules are available in standard heights up to 48 inches with closed, transparent or open backs and options such as platform bases and clear doors for security. Sort Modules lock into consoles or can be wall-mounted. Shelves are available in four different sizes, are fully adjustable on 1-inch increments, and come in several colors or transparent. Shelf labels are the full shelf width and are supplied with labels for color coding.

*Whether it's aluminum-framed consoles, laminate consoles or sort modules, keeping correspondence and important information – incoming and outgoing – in order is an essential step in assuring that the right information gets to the right place. Choosing durable and flexible mailroom furniture to get the job done can have immediate effects on productivity.*
