

GROW CROSSWALK

INFO SHEET

REACH NEW HEIGHTS

The **GROW Crosswalk** is designed to improve efficiency and access while servicing the upper levels of Spacesaver GROW Mobile systems. The Crosswalk provides users with a raised working station that securely integrates with new and existing GROW uprights and can be utilized during all stages of indoor cultivation.

GROW Crosswalk

provides a better way to:

- Care for plants and systems
- Promote safe and ergonomic access
- Increase labor efficiency

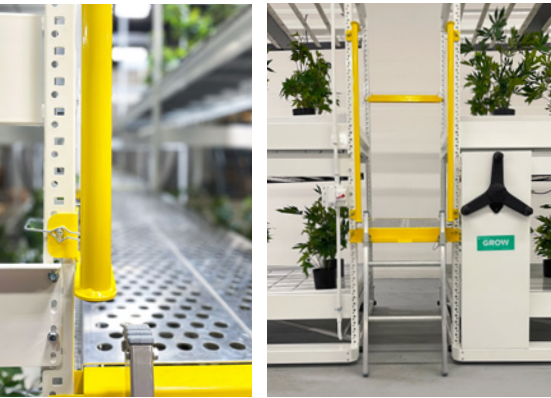

SPACESAVER'S

GROW Crosswalk

consists of the following components:

- 1 TEMPORARY RAISED WALKING PLANKS WITHIN THE LENGTH OF THE AISLE
- 2 CROSS SUPPORTS CONNECTING UPRIGHTS AND REINFORCING PLANKS
- 3 FRONT AND REAR SAFETY BARRIERS
- 4 ACCESS LADDER(S)
- 5 GRAB HANDLES

WHY IT'S NEEDED

Cultivators often spend extended periods of time working with plants that are above ground level, utilizing solutions that can be both inefficient and hazardous.

To provide a better way to tend your plants while getting in and out of aisles as quickly and easily as possible, Spacesaver created the **GROW Crosswalk** as an effective solution that **allows safe and secure access to your second-tier or higher plants**.

WHY IT'S BETTER

Unlike a ladder or lift, the **GROW Crosswalk** remains secured in place for the length of the grow aisle while you and your colleagues work. **Planks – available in lengths of 4' and 8'** – set into cross supports secured to GROW uprights with locking pins. The locking pins make installation and removal faster and easier than systems that use nuts and bolts. Additionally, cross supports are designed to attach to any available part of the GROW racking upright, allowing for **ultimate flexibility of platform height and ergonomically sound functionality** for workers of all statures.

WHY IT'S SAFE

Spacesaver built the **GROW Crosswalk** with safety in mind. Featuring perforations and raised, anti-slip features, **each 22"-wide plank is rated to a two-person, 500lb capacity and tested up to 2,000lb to support OSHA compliance**.

For safe entrance and exit of the plank, the Crosswalk's offset grab handles allow for installation on any upright in any aisle, while its safety barriers can be installed on the upright to protect growers when the system is in use.
