

Lockers on Purpose

Because one-size-fits-all never fits that well

Materials. Locks. Tradeoffs.

Today's lockers live across buildings, industries, and experiences — each shaped by who's using them, where they live, and what they need to do.

Every locker balances three things:

Budget | Durability | User experience

Material and lock selections are less about preference and more about context.

COMMON MATERIALS

Laminate: Clean, controlled environments | Interior-friendly

Metal: Heavy use | Utility-first | Built to take abuse

Phenolic: Handles moisture, chemicals, frequent cleaning

Wire: Visibility | Ventilation | Fast inspection

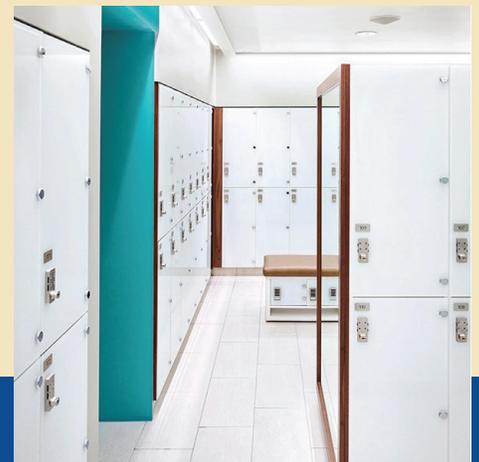

Glass/Speciality: Design-forward | Highly visible spaces

LOCK TYPES

Mechanical: Simple | Lowest cost | User-managed

Multi-User: Resettable | Faster turnover | Fewer lost keys | RFID technology available

Smart: Software-managed | Full visibility & reporting | Rules, automation, accountability

THE LOCK IS THE KEY

Locks don't just secure lockers. They also define workflow. In many projects, the lock choice matters as much as the locker itself.

Lockers in the Real World

Lockers show up in very different environments, and they succeed or fail based on the problem they're meant to solve.

PUBLIC SAFETY

Control & Chain of Custody

Evidence intake, temporary holding, and after-hours handoff

Weapons and restricted items that require separation and accountability

Gear that needs to be visible, ready, and audit-friendly

Outcome: Clear custody, fewer gaps, stronger process control

WORKPLACE

People Flow & Systems

Day-use lockers supporting hybrid work and shared spaces

Device lockers for access control, charging, and tracking

Parcel and visitor lockers handling handoff and notifications

Outcome: Faster movement, cleaner spaces, fewer friction points

HOSPITALITY / EDUCATION / ATHLETICS

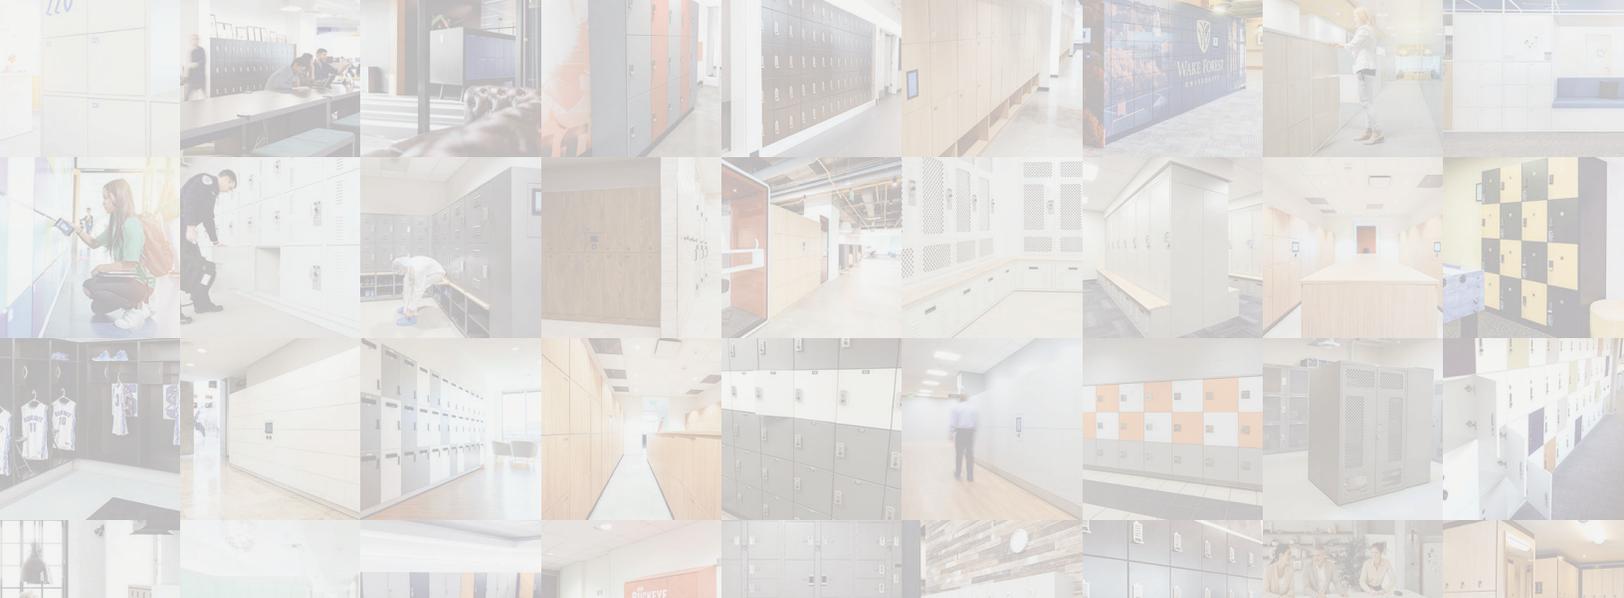

Perception & Variety

Staff vs. guest lockers with very different expectations

Moisture-heavy environments like spas and locker rooms

Athletic lockers that double as recruiting tools and team branding

Outcome: Spaces that feel intentional, not improvised
