

PUBLIC SAFETY STORAGE

CRIME LAB STORAGE

Storage that Holds Up Under a Microscope

Walk into most crime labs, and you'll find instruments, reagents, and case files all competing for the same bench space. That's the kind of STUFF Patterson Pope handles best; not just finding it a home, but building systems that keep analysts moving and evidence exactly where it needs to be.

Workstations & Instruments

The work happens at the bench, not on a shelf. Modular casework builds storage into the workstation itself, heavy-duty workstations bring chemical-resistant surfaces to demanding prep work, and stainless steel cabinets keep instruments protected between uses, no matter which discipline is running the bench.

Reference & Trace Evidence

A single case can generate slides, vials, fibers, and reference samples that are easy to lose track of. Modular drawer cabinets give each one its own labeled compartment, high-density mobile shelving lets growing collections expand, and static shelving keeps everyday bins and trays in easy reach.

Reagents, Supplies, & PPE

Gloves and swabs get grabbed constantly, while reserve inventory can sit for weeks. Static shelving keeps everyday supplies visible and ready to grab, high-density mobile shelving reclaims floor space for bulk stock, and personal storage lockers give each analyst's PPE a dedicated spot of its own.

Casework Records & Documentation

Case packets, procedure manuals, and quality records pile up fast, whether they're pulled weekly or just held for an audit. Rotary file cabinets pack dense filing into a fraction of the footprint, high-density mobile shelving gives records room to grow, and cabinets keep restricted documents locked away.
